

### **Item7c – DFC Planning Efforts**

GMA 12 members were scheduled to will meet Thursday, March 26, 2020 in the Post Oak Savannah GCD office, but the meeting was cancelled due to the COVID-19 situation.

Post Oak Savannah GCD Board has not yet determined their preferred avenue forward on desired future conditions (DFCs) for the Carrizo, Sparta, and Simsboro aquifers. Following two meetings of their DFC Planning Committee, a recommendation was put forth to use the Scenario 7 (S7) model run with internal modifications. POSGCD board members approved the recommendation during a May 12<sup>th</sup> regular board meeting. The actual modifications to the S7 model run will still need to be hammered out and approved by the Board. One modification likely to be entertained is an improvement of transmissivity values in and around the Vista Ridge well field based on pumping test data that was recently been obtained.

Lost Pines GCD met in February to discuss options for DFC determinations but no action was taken. I have been told that the Board will not likely meet again until June.

There is an agreement among members with relevant Yegua-Jackson pumping to perform no further model runs following a revision to the Post Oak Savannah GCD pumping files. Similarly, Post Oak Savannah and Brazos Valley GCDs have agreed to use the same method of calculating DFCs for the Brazos River Alluvium Aquifer as was done in the 2016 round of planning. This followed extensive analysis of groundwater model runs done using two groundwater availability models. These runs specifically addressed groundwater/surface water interaction with aquifers transected by the Brazos River.

Brazos Valley GCD, Mid-East Texas GCD, Fayette County GCD, and Lost Pines have all agreed to use the S7 model run as the basis for DFC determinations. GMA 12 is much closer to having consensus on the model run to be used based on Post Oak Savannah GCD recent action.

Member districts have been asked to bring recommended DFCs from each of the respect district boards to move the planning process forward. It appears our best case scenario for a GMA 12 meeting is late June or early July. The meeting will most likely be held in a virtual format.
