

BRAZOS VALLEY GROUNDWATER CONSERVATION DISTRICT

2023 ANNUAL REPORT

TO

BVGCD BOARD OF DIRECTORS

ON

ATTAINMENT OF MANAGEMENT PLAN OBJECTIVES

1. Implement Strategies Providing For the Most Efficient Use of Groundwater:

1a. Objective – Require all existing and new non-exempt wells constructed within the boundaries of the District to be permitted by the District and operated in accordance with District Rules. In addition, the District will encourage all exempt wells constructed within the District boundaries to be registered with the District.

1a. Performance Standard – The number of exempt and permitted wells registered within the District will be reported annually in the District’s Annual Report submitted to the Board of Directors of the District.

1a. Performance Measurement – A total of 102 new non-exempt wells were permitted during 2023. The District registered 414 exempt wells (187 in Brazos County, 155 in Robertson County, 72 oil and gas rig supply) in both counties combined. Totals for all existing wells ending 2023:

Domestic/Livestock (Exempt) – 4,672

Gas & Oil (Exempt) – 1,312

Historic Use (Permitted) – 617

Operating (Permitted) – 167

Drilling/Operating (Permitted) - 293

1b. Objective – Regulate the production of groundwater by permitting wells within the District’s boundaries based on beneficial use and in accordance with District Rules. Each year the District will accept and process applications for the permitted use of groundwater in the District, in accordance with the permitting process established by District Rules. The District will regulate the production of groundwater from permitted wells by verification of pumpage volumes using meters.

1b. Performance Standard –The number and type of applications made for permitted use of groundwater in the District, number and type of permits issued by the District, and amount of groundwater permitted will be included in the Annual Report given to the Board of Directors.

1b. Performance Measurement –

Number of applications for permitted use (2023): 102

Type of applications made/permits issued

- **Agricultural – 4/4**
- **Industrial – 0/0**
- **Multi-Use – Agricultural/Commercial/Industrial/ Municipal/PWS – 86/86**
- **Rural Public Water Supply – 3/3**
- **Municipal – 9/9**
- **Steam Electric – 0/0**

**2023 Permitted Water Production in Acre Feet by Aquifer/User Group
(New Permits Issued in 2023)**

	Agricultural	Industrial	Municipal/ PWS & Other Uses	Rural Water	Steam Electric	Transport Permits Issued	Total Permitted Production

1b. Performance Standard – Actual annual pumpage from each metered well within the District will be reported annually and compared to the amount permitted for that well. This information will be included in the District’s Annual Report submitted to the Board of Directors of the District.

1b. Performance Measurement – A spreadsheet detailing the 2023 actual water production, permitted allowance, and fees for each metered well in the District are shown below:

1c. Objective – Conduct ongoing monitoring of the aquifers underlying the District and the current groundwater production within the District, and then assess the available groundwater that can be produced from each aquifer within the District after sufficient data are collected and evaluated. Using this data and information developed for GMA 12, the District will re-evaluate availability goals as necessary and will permit wells in accordance with the appropriate production goals.

1c. Performance Standard – The District will conduct the appropriate studies to identify the issues and criteria needed to address groundwater management needs within the District’s boundaries. Groundwater availability goals will take into consideration the GMA 12 planning and research of the hydro-geologic and geologic characteristics of the aquifers, which may include, but not necessarily be limited to, the amount of water use, water quality, and water level declines.

1c. Performance Measurement – **222 wells are now being monitored across the District encompassing all aquifers. Of that number, 149 lie over the Carrizo-Wilcox group, 73 over the Brazos River Alluvium, Queen City, Sparta, and Yegua-Jackson. The total number of readings for all designated monitoring wells during 2023 was 691. A comparison with previous years shows the well monitoring program remains robust and the most effective method to ascertain aquifer levels in relationship to the desired future conditions.**

- **2023 – 222 wells in the network | 691 measurements**
- **2022 – 195 wells in the network | 460 measurements**
- **2021 – 167 wells in the network | 416 measurements**
- **2020 – 167 wells in the network | 511 measurements**
- **2019 – 161 wells in the network | 324 measurements**
- **2018 – 158 wells in the network | 357 measurements**
- **2017 – 158 wells in the network | 524 measurements**

The third round of Desired Future Condition (DFC) planning featured an updated Central Queen City-Sparta/Carrizo-Wilcox Groundwater Availability Model (GAM) approved for use by the Texas Water Development Board (TWDB) in December 2018. The update was a cooperative effort by GMA 12 members and the TWDB. The update focused on better definition of faulting and fault impacts, surface/groundwater interaction along the Brazos and Colorado River basins, and improved definition of interaction between aquifers.

DFC planning for 2021 began in early 2019. The newly updated approved GAM was being used for all aquifers except the Brazos River Alluvium and Yegua-Jackson aquifers. The latter have independently approved GAMs which were sourced for DFC determination.

The Board declared the Brazos River Alluvium relevant for the 2021 round of DFC planning and mirrors the 2016 DFC planning round. With relevancy declared, a DFC was once again be determined and adopted as required by statute.

The Yegua-Jackson Aquifer has historically been broken down to two separate aquifers and each received a corresponding DFC. Brazos Valley Groundwater Conservation District board members approved the combination of the two aquifer layers resulting in one (1) DFC. This mimics our GMA 12 partners' expression of Yegua-Jackson DFCs.

The Gulf Coast Aquifer occurs in the very southern part of Brazos County under about 1.3 percent of the Brazos Valley Groundwater Conservation District area that encompasses Brazos and Robertson counties. The aquifer provides small amounts of water to a limited number of wells no greater than 250 feet deep. Its contribution to the overall groundwater supply within the Brazos Valley Groundwater Conservation District is de minimis. This aquifer was declared non-relevant for the 2021 DFC planning process.

The DFCs adopted in November 2021 during the GMA 12 planning process and the artesian head decline within each aquifer are:

Aquifer	DFCs ft drawdown (2000-2070)	Artesian Head Decline (2000-2023)
HOOPER	167'	5'
SIMSBORO	262'	58'
CALVERT BLUFF	111'	+1'
CARRIZO	84'	14'
QUEEN CITY	44'	No Change
SPARTA	53'	16'
YEGUA-JACKSON	67'	+9'
BRAZOS RIVER ALLUVIUM	≥ 30% - N of Hwy 21 ≥ 40% - S of Hwy 21	64%

Following static water level measurements taken during January-April each year, calculations are made to determine if the District remains in compliance with the DFCs, calculates the artesian head decline trend line for each quarter, and determines if any management strategies need to be implemented on a given aquifer. The District is in compliance with the DFCs set for the all managed aquifers within the boundaries of the District.

1c. Performance Standard – A progress report on the work of the District regarding the groundwater availability will be written annually, as substantial additional data are developed. The progress report will be included in the annual report to the District Board of Directors.

1c. Performance Measurement – The Brazos Valley Groundwater Conservation District (BVGCD) has inventoried pumping of permit holders for several years. Obtaining accurate data regarding the quantity of groundwater pumped is an important effort with data collected on a monthly or annual basis.

Water-level data are collected from a water-level monitoring network to evaluate water-level changes that occur throughout the year or over several years in response to changes in groundwater pumping. Data continues to be collected and utilized as overall groundwater availability within the BVGCD is evaluated. Data collected has been and will continue to be utilized in the GMA 12 regional water planning effort. During the current DFC planning process, revised estimates of groundwater availability were developed based on the review of the groundwater pumping and well water-level data being collected and evaluated. Results from the BVGCD's efforts also provides data for the Texas Water Development Board (TWDB) regional groundwater availability model used as a water resource planning tool.

From 2007 through 2021, GMA 12, composed of five groundwater districts, participated in the process of developing DFCs. During that time, the BVGCD enhanced its inventory of groundwater pumping data and initiated a robust program of water-level monitoring to provide data for continued evaluation of groundwater resources. The collection of water-level monitoring data by the BVGCD began during the late 2010. Data before that time, a limited water-level data set was collected by the TWDB.

As part of the GMA 12 effort, estimates of Modeled Available Groundwater (MAG) were developed in late 2021 by the TWDB based on the adopted DFCs. The current estimates of MAG within the BVGCD are given in Table 1. The Board declared the Brazos River Alluvium Aquifer relevant for the 2021 DFC planning process.

Table 1. Estimates of Groundwater Availability (2021)

Aquifer	Modeled Available Groundwater, ac-ft/yr
Carrizo	5,499
Queen City	1,269
Simsboro	147,245
Calvert Bluff	1,725
Hooper	2,139
Sparta	13,402
Yegua-Jackson	7,091
Brazos River Alluvium	130,657

Table 2. Metered Groundwater Pumping, ac-ft/yr

Aquifer	2018	2019	2020	2021	2022	2023
Carrizo	825.25	992.40	1,061.68	955.61	1,575.09	1,079.16
Queen City	146.54	400.88	102.62	45.30	92.83	133.83
Simsboro	54,551.38	50,528.07	53,163.83	51,127.64	58,313.28	54,630.15

Hooper	809.07	699.98	745.86	918.22	1,044.94	1,077.52
Sparta	4,499.56	3,869.64	3,389.46	3,161.20	4,308.08	3,955.31
Yegua-Jackson	1,183.12	1,278.11	1,253.18	948.24	1,260.70	1,104.59
Brazos River Alluvium	55.34	74.53	66.82	32.97	30.20	22.03

Water-Level Monitoring Data for 2009-2023

As groundwater pumping occurs within the BVGCD, water levels are measured in wells screening the aquifers to evaluate their response to continuing pumping. The TWDB has had a program of measuring water levels in certain wells within the BVGCD for decades. With that program, water levels were measured in about 21 wells on an annual basis. Beginning in 2009, the BVGCD also began measuring water levels in 5 additional wells screening sands of the Simsboro Aquifer. By 2016, the water level measuring effort has blossomed to 158 wells covering all managed District aquifers.

During 2015, the monitoring wells network emphasis was adding wells in the unconfined portions of the aquifers. A high level of importance was placed on locating unconfined wells in the Hooper and Simsboro aquifers. Several were also located in both the Calvert Bluff and Queen City aquifers. District staff continues to search for wells, both confined and unconfined, in the Sparta and Carrizo aquifers. Some wells were taken out of the monitoring network due to their close proximity to other monitoring wells in the same aquifer with more historical measurement data.

Measurement of water levels in monitoring wells took a significant turn during 2016. A rigid measurement protocol was developed and adopted by the Board of Directors in August 2016 placing strong emphasis on quality of data collected. Wells with storied historical data were given preferential placement in the data collection program. Multiple wells in close proximity and screening the same aquifer were evaluated with some being retired from the network. Others were deleted because of the inability to meet the strict protocol established by the Board. Newly identified wells with historical data were evaluated and incorporated into the program.

Several improvements to the well measurement network were made beginning mid-2016 and throughout 2017. The improvements included:

- Removal of wells with little or no historical measurements**
- Removal of wells that were difficult to obtain consistently accurate measurements**
- Addition of new wells with areal distribution more properly suited to long-term measuring across the District and within aquifers.**
- Reconciliation of the screened geologic zone for each of the wells being measured**

2022 & 2023 were extraordinarily hot and dry years resulting in extremely dry summer conditions and a corresponding increase in pumping from the Simsboro Aquifer district-wide. Most notable was a significant decrease in artesian pressure in Simsboro wells located within a ten-mile radius of the intersection of FM 1644 and Providence Road.

Precipitous drops were seen in wells located in the Brazos River Bottom, in and around both Hearne and Calvert, and both east and north of Calvert.

District staff began measuring the effect of pumping in the described zone July 7, 2022 and continued until all Simboro agricultural pumping ended (mid-November 2022). Staff obtained 102 measurements, most of which occur by October 1, 2022, to ascertain the magnitude of artesian reduction during that period as well as the rate of recovery once all agricultural pumping had ceased. Static water levels in Simsboro wells recovered up until onset of both agricultural and municipal irrigation pumping began in early June 2023. District staff continued to aggressively monitor Simsboro Aquifer water levels prior to, during, and after high level of production occurred. By the end of 2023, an additional 446 water level measurements have been obtained above and beyond the normal Simsboro measurements taken quarterly. This data will be used to better define the effects of pumping locally.

Additionally, District Staff began the process of identifying Simsboro wells within and beyond the above-described zone. This search was precipitated by the issuance on water production and transport permits from the Simsboro Aquifer to UW Brazos Valley Farm, LLC. Simsboro wells will receive well assistance from the District once certain production trigger levels have either been reached or foreseen to occur within 2.5 years. A list of Simsboro wells with the potential of significant impact from the predicted pumping has been compiled and verification of the screened aquifer commenced in mid-October. The verification process was completed in early May 2023. Additional wells are being added to the listing during 2024 in an attempt to identify every Simsboro well within the boundaries of the District. A total of 691 measurements from designated monitoring wells were obtained during 2023.

Board members at each permit hearing and board meeting are provided a table listing the modeled available groundwater assessed for each aquifer, the amount of water permitted in each aquifer or aquifer subdivision, and the amount of water pumped from each aquifer beginning in 2009 and extending through 2023.

2. Implement Strategies to Control and Prevent Waste of Groundwater:

2a. Objective – Apply a water use fee to the permitted use of groundwater in the District to encourage conservation-oriented use of the groundwater resources to eliminate or reduce waste.

2a. Performance Standard – Each year the District will apply a water use fee to the non-exempt permitted use of groundwater produced within the District pursuant to District rules. The amount of fees generated, and the amount of water produced for each type of permitted use will be a part of the Annual Report presented to the District Board of Directors.

2a. Performance Measurement – During 2023, water production within the District generated total fees of \$792,643.31. The amount generated and actual water production for each permit type is listed below.

<u>Type of Permit</u>	<u>Fees Generated</u>	<u>Water Used</u>
Agricultural (metered)	\$1,021.79	5,449.56 ac ft.
Agricultural (non-metered)	\$17,792.11	*94,891.23 ac ft.
Industrial	\$53,174.79	3,528.38 ac ft.
Municipal Water Supply	\$644,564.72	42,769.65 ac ft.
Rural Water Supply	\$74,426.29	4,938.51 ac ft.
Steam Electric	\$1,663.61	5,656.63 ac ft.
Water Transported	\$0.00	0.00 ac ft.
Fees Generated (2022)	\$792,643.31	

*Unmetered agricultural irrigation permits are charged fees for the full permitted amount. The only metered production reported in the Brazos River Alluvium Aquifer is from wells permitted for other than agricultural use.

2b. Objective – Evaluate District rules annually to determine whether any amendments are necessary to decrease the amount of waste within the District.

2b. Performance Standard – The District will include a discussion of the annual evaluation of the District Rules, and the determination of whether any amendments to the rules are necessary to prevent the waste of groundwater in the Annual Report of the District provided to the Board of Directors.

2b. Performance Measurement – **The Rules Committee met December 8, 2022, to review the entire set of rules and determine if revisions needed to be considered. Committee members considered suggestions by District staff to:**

- **Extend notice of public permit hearing beyond ten (10) days**
- **Ability of staff to change the places of public permit hearings**
- **Extend ability of the public to file written notice of intent to contest a permit up until one (1) day prior to the hearing**
- **Definition of an administratively complete permit application**
- **Production meter calibration protocol**
- **Well Assistance Agreement approved by the Board of Directors October 20, 2022 as prescribed by the approved production permits issued**
- **Various suggestions related to the formula currently used to the allowable permitted production on all new production permits issued**

The Rules Committee instructed District Staff to begin working on revised or additional language based on the suggestions listed. The committee met in an open meeting to March 22, 2023 to discuss spacing between wells, extending notice for larger production permits, and do away with the overlapping of footprints for wells in all aquifers.

July 10, 2023, the District held a Rules Workshop prior to the Regular Board meeting to review and discuss twenty-four (24) suggested revisions to the District

Rules. Each rule change was discussed and language agreed upon during the meeting. A Rules Hearing was set for September 14, 2023.

Following are rule changes directly related to conservation of aquifer resources.

- **Spacing for wells in all aquifers will be 2’/aagpm of production**
- **No overlapping of “footprints” of prospective permitted wells**
- **Definition of a “new well”**
- **Calibration and certification of all production meters (based on permitted amount)**
- **Definitive end date for drilling a well on an issued permit**
- **Effect of pumping by an applied for permit on the Desired Future Condition of the related aquifer**
- **Hydrogeologic impact of pumping by an applied for permit out to a 10-mile radius from the well(s)**
- **One (1) day notice to contest a permit**
- **20-day notice for production permit applications of 800 ac-ft or more**
- **Well assistance program structure**
- **Adoption of \$0.20/1000 gallon export fee allowed by TWC Chapter 36**
- **System to petition the District for rulemaking purposes**

A total of twenty-four (24) rules were revised or added to the District Rules September 14, 2023.

2c. Objective – Provide information to the public and the schools within the District on the wise use of water to eliminate and reduce wasteful practices.

2c. Performance Standard – The District will include a page on the District’s website devoted to the wise use of water and providing tips to help eliminate and reduce wasteful use of groundwater. The District will provide information to local school districts including Texas Education Agency approved water curriculum and in-school presentations to encourage wise use of water and understanding of the significance of aquifers to District residents.

2c. Performance Measurement – One page is dedicated solely to water conservation tips for the home and homeowner landscape. The page also contains a hyperlink directing visitors to the District sponsored BVWaterSmart irrigation network website to obtain weekly site specific watering recommendations. The other is “TWDB Kids website”, an area that targets water conservation education at elementary school students.

The Palmer Drought Severity Index and the latest U.S. Drought Monitor is displayed and refreshed weekly on the homepage. News articles relating to water and conservation are also easily accessed from the homepage. Visitors can download an application for a \$25 rebate on the purchase of a rain barrel for conservation purposes using one of the tabs. Well owners also have access to information relating to the cost-share well plugging program. The District now shares in the cost of plugging a well at a level of 75% of the total cost up to \$1,000/well.

The “Major Rivers” water curriculum was distributed to several 4th grade students in both Brazos and Robertson counties. The curriculum includes sections covering water conservation and the ways to wisely use water. Approximately 750 were exposed to the water curriculum in 2023. Distribution totals were greatly reduced in 2023 due to the availability of the curriculum to teachers in an online version.

Many of the above-mentioned school districts were also provided in-class demonstrations of aquifer characteristics, the water cycle and its importance to the aquifers, and instruction on water conservation and its effect on the longevity of District aquifers. Approximately 6,069 students were exposed to the 45-70 minute teaching sessions. This included presentations to 4th, 5th, and 7th grade classes. District staff conducts laboratory sessions addressing water quality to 7th grade students in the District.

4th grade students from Bryan, College Station, and surrounding county ISDs were taught the importance of water conservation during the Brazos County Texas AgriLife Extension Service “Pizza Ranch” event held during October 12, 2023. The District exposed 620 students on the importance of water and the conservation of the natural resource.

The District annually organizes and conducts a “Water Conservation Field Day” for all the 5th grade students in Robertson County school districts. This includes Hearne, Mumford, Calvert, Bremond, and Franklin ISDs. The field day was conducted on October 24, 2023 at the Robertson County Fairgrounds. 234 5th students and teachers attended the field day.

The Brazos County Water Field Day for Pecan Trail Intermediate School was conducted on October 10, 2023 in College Station, Texas. The District partners with Texas A&M University Utilities and The City of College Station Wastewater Department to host the event highlighting water conservation. 380 5th grade students participated in the event.

The District has implemented the BVWaterSmart Irrigation Network in 2015 for use by homeowners in the District offering irrigation rates throughout the lawn growing season. This effort is a partnership between the City of Bryan, City of College Station, Wickson Creek SUD, and Wellborn SUD using funds awarded by the District for the purchase of weather stations, wireless rain gauges, establishment of a website, and a contract to gather information for homeowner

use. The District has an ongoing commitment to maintain funding for both the website and necessary maintenance to the equipment.

An ongoing pilot project was approved to purchase and install Rachio irrigation controllers on high-end water user systems. The controllers will monitor the BVWaterSmart weather station closest to the cooperator remotely shutting the system off when enough moisture has been received. The effort removes the human factor from the watering equation and should allow the District to determine cost-savings to the cooperator and water conserved. Ten cooperators were identified and units installed in early 2021.

The website associated the BVWaterSmart project received 314,279 visits from 24,427 individual users primarily between May and September, 2023. The most active period was May-October mirroring the extremely dry 2023 growing season for lawn irrigation in the District.

Other Educational Activities:

Tri-County AgriLife Winter Crops Meeting – January 24, 2023 (55)

Robertson County Commissioners Court presentation – February 27, 2023

TAMU GEO 410 – April 5, 2023 (14)

Brazos County Commissioners Court presentation – May 2, 2023

City of College Station City Council presentation – May 15, 2023

3. Implement Strategies to Address Conjunctive Surface Water Management Issues:

3a. Objective – Encourage the use of surface water supplies where available, to meet the needs of specific user groups within the District.

3a. Performance Standard – The District will participate in the Region G Regional Water Planning process by attending at least one BGRWPG meeting annually and will encourage the development of surface water supplies where appropriate. This activity will be noted in the Annual Report presented to the District Board of Directors.

3a. Performance Measurement – **The District was actively engaged in the Regional G Water Planning process during 2023. A District staff member attended the following meetings:**

- **March 8, 2023**
- **July 27, 2023**
- **October 20, 2023**

4. **Implement Strategies to Address Natural Resource Issues which Impact the Use and Availability of groundwater, and which are impacted by the Use of Groundwater:**

4a. Objective – Determine if there are any natural spring flows within the District that may be impacted by increased groundwater pumping.

4a. Performance Standard – Annually monitor water levels in at least 2 wells near natural spring flows, if found, for potential impact from groundwater production. Prepare an annual assessment statement and include in annual report to the District Board of Directors.

4a. Performance Measurement – **An active search for springs within the District is an ongoing effort. District staff continues to search for and attempt to identify possible springs within the District boundaries. No new springs were identified during 2023.**

5. **Implement Strategies to Address Drought Conditions:**

5a. Objective – A District staff member will download at least one Palmer Drought Severity Index (PDSI) map monthly. The Palmer Drought Severity Index map will be used to monitor drought conditions and will be used by the Board to determine trigger conditions provided by the District’s Drought Contingency Plan.

5a. Performance Standard –The District will make an assessment of drought conditions in the District and will brief the District Board at each regularly scheduled Board meeting.

5a. Performance Measurement – District staff provided multiple drought assessment documents to the Board members at each of the 11 Regular Board meetings in 2023. These included the most recent Palmer Drought Severity Index, U.S. Drought Monitor for Texas, and U.S. Seasonal Drought Outlook. The General Manager continued to email these same drought maps to the directors on a weekly basis.

5b. Objective – Require 100 percent of entities that are mandated by the State of Texas to have drought contingency plans, to submit those plans to the District or follow the District’s plan when applying for a permit from the District for water production.

5b. Performance Standard – Review 100 percent of the drought contingency plans submitted as a result of permitting, whenever permit applications for water production are received. The number of drought contingency plans required to be submitted by permitted entities to the District as part of the well permitting process and the number of drought contingency plans actually submitted to the District will be described in the Annual Report to the District Board.

5b. Performance Measurement – 102 permit applications were received during 2023 requiring a drought contingency plan. Sixteen (16) of the applicants (90 permits) agreed to abide by the District Water Conservation Plan (DWCP) revised and adopted August 8, 2018. Seven (7) applicants (12 permits) provided their own approved drought contingency plan all of which were reviewed by District staff.

All applicants for permitted wells not submitting an approved drought contingency plan are required to sign the application attesting to the submission of their own drought contingency plan or the agreement to abide by the District Plan.

5c. Objective – The District drought contingency plan will be reviewed for effectiveness and needed updates once annually.

5c. Performance Standard – A report summarizing the findings of the annual review of the District drought contingency plan will be included in the Annual Report of the District Board of Directors.

5c. Performance Measurement – A District Drought Contingency Plan (DDCP) was developed and originally adopted November 4, 2010. The Plan was last amended on November 8, 2012. This document was reviewed by the Education/Conservation Committee and a committee report was presented to the Board regarding any recommendations for updates, changes, or additions needed. The DDCP was re-adopted with no revisions by the Board of Directors October 12, 2023.

6. **Implement Strategies to Promote Water Conservation:**

6a. Objective - Require 100 percent of the water applicants requesting a permit for water production within the District to submit a water conservation plan, unless one is already on file with the District at the time of the permit application, or agree to comply with the District's adopted Water Conservation Plan.

6a. Performance Standard – Review 100 percent of the water conservation plans submitted as a result of permit requirements to ensure compliance with permit conditions. The number of water conservation plans required to be submitted by water permittees to the District that year as part of the well permitting process and the number of water conservation plans actually submitted to the District will be reported in the Annual Report to the District Board of Directors. If the permittee chooses to agree to follow the District's adopted Water Conservation Plan in lieu of submitting a water conservation plan, then that number will be indicated in the Annual Report to the District Board.

6a. Performance Measurement – **Twenty-three (23) permit applications were received during 2023 requesting 102 production permits. No water conservation plans were received with ninety (90) of the submitted permit applications (16 entities). Seven of the applicants submitted approved Water Conservation Plans for twelve (12) permits. All applicants not submitting a plan agreed to abide by the District Water Conservation Plan revised and adopted December 2, 2010, amended August 9, 2018, September 9, 2021 and September 8, 2023 updating statistical & demographic information.**

- **Applications requiring Water Conservation Plans – 7 (12 permits)**
- **Water conservation plans submitted – 7**
- **Water conservation plans reviewed – 7**
- **Applicants abiding by the District Water Conservation Plan – 16 (90 permits)**

6b. Objective – Develop a system for measurement and evaluation of groundwater supplies.

6b. Performance Standard – Water level monitoring wells will be identified for Brazos River Alluvium, Yegua-Jackson, Sparta, Queen City, Carrizo, Calvert Bluff, Simsboro and Hooper aquifers. At least two (2) wells per aquifer will be monitored on an annual basis to track changes in static water levels.

6b. Performance Measurement – Currently there are 222 wells in the monitoring network. The Brazos River Alluvium, Simsboro, Hooper, Sparta, Yegua Jackson, Queen City, Carrizo, and Calvert Bluff aquifers all have at least 2 monitoring wells. District staff continues cultivate monitoring wells in all of the aquifers. A total of 691 readings were taken during 2023.

Aquifer	Readings	# Monitor Wells
Hooper	50	19
Simsboro	300	81

6c. Objective – Assist in obtaining grant funds for the implementation of water conservation methods. Work with the appropriate state and federal agencies to facilitate bringing grant funds to various groups within the District boundaries to develop and implement water conservation methods. Work with local entities to help develop and implement water conservation methods. The District will meet with at least one state or federal agency annually in order to discuss bringing water conservation methods grant funds into the District.

6c. Performance Standard – Number of meetings held annually with at least one state or federal agency and the number of grants for water conservation methods applied for and obtained will be included in the annual report to the District Board of Directors.

6c. Performance Measurement – **The General Manager visited with the Robertson/Brazos County Natural Resources Conservation Service (NRCS) Zone 4 Conservation Engineer Kevin LaStrapes May 2023 to determine what, if any, grant funding programs are available and, if so, what categories would be eligible. This was done to facilitate bringing grant fund opportunities into the District for development and implementation of water conservation methods and averting groundwater contamination. General Manager personally contacted Javier Garza, Robertson County NRCS Manager, on October 24, 2023 to discuss cost-share availability for both well decommissioning and remote-control access devices for agricultural pivot irrigation systems.**

The NRCS has determined that agricultural producers can be eligible to receive funding from the agency as well as receiving grant funds from the District in regard to the decommissioning of water wells. This could greatly enhance the desire of producers who wish to plug old water wells but are unwilling to spend a substantial amount of money to accomplish the task.

It was determined that well owners desiring tap into both NRCS funds and District funds for plugging purposes should first go through the application

process with the NRCS. This protocol allows for submission of an application while the well is still open. If the well is plugged prior to submission of an NRCS application, NRCS will not retroactively fund the plugging of the well. Both agencies agreed to push the message out to a targeted audience of agricultural irrigators during 2023.

The General Manager corresponded by email on October 19 & 20, 2023 with Antonio Delgado, TWDB Agricultural Water Conservation Program, concerning agricultural grant money available to groundwater conservation districts and projects eligible for grant consideration. The District is waiting for an announcement related to 2024 agricultural conservation grant funds. The District's effort to remunerate producers seeking to install new remote control agricultural irrigation technology is an established TWDB grant fundable project.

6c. Performance Standard – Once annually, the District will conduct a meeting to address potential District grant funding for water conservation projects. Following proposal submission, applications will be reviewed for possible District Board approval. The number of water conservation projects submitted and the number of projects approved for grant funding by the District will be reported in the Annual Report to the District Board.

The Grant Committee met on September 26, 2023 to review the current grants and to consider continuing to fund the existing programs. Grant proposals would be brought directly to the full Board for consideration on an individual basis. The committee vets all proposals before presentation to the full Board with a recommendation. The committee continues to oversee and obtain updated information on ongoing grant projects. Periodic reports are given to the full board on an as needed basis. All current grant funded programs were recommended for continuation. The committee considered and recommended that the Board include cost-sharing on agricultural soil moisture sensors in the established remote-control sensor grant funds.

The District renewed a commitment to continue grant obligations to The City of College Station, Wickson SUD, and Wellborn SUD regarding the BVWaterSmart Irrigation Network and its ongoing operations. This grant received approval during the November 16, 2023 board meeting. The City of Bryan is also a partner in the program providing a weather station and wireless rain gauge locations but chose not to receive any grant funds.

Grant contracts associated with water well plugging continued during 2023. There were nine (6) entities that signed grant contracts with the District to engage in the plugging of nine (9) water wells. Each of these contracts was fulfilled during 2023 with a total expenditure of \$8,904.36. The well plugging grant program has been extended for FY 2024.

Grant funds (cost-share) in the amount of \$10,000 were committed to agricultural producers who installed new remote control agricultural pivot access devices on or after January 1, 2020. Each installed device is eligible for a one-time grant. The District will cover 50% of total cost of equipment, installation, and application subscription not to exceed \$1,000/device. No new devices were installed during 2023. The grant program was reauthorized for FY 2024.

7. **Implement Strategies to Protect Water Quality:**

7a. Objective - Develop baseline water quality data and a system for continued evaluation of groundwater quality.

7a. Performance Standard – Develop general understanding of water quality within aquifers in the District based on TCEQ and TWDB data. Coordinate with TCEQ on water quality issues.

7a. Long term water quality reports taken by the TWDB over many years have been compiled by the District hydrologist and made available to the directors. The material will be summarized for Board member use.

District staff reviewed the TCEQ “Groundwater Monitoring and Contamination Report – 2022” once it became available in 2023. Sites having a “reportable event” contact TCEQ for their assessment and follow up. TCEQ is the primary enforcement agency regarding the collection of data, assessment of possible contamination, and remediation of the contamination, if necessary.

Water samples are accepted at the District Office to help facilitate water sampling. Samples are delivered to the Texas A&M University Soil, Forage, and Water Laboratories. Copies of the results are obtained by the District for future reference. No water samples were gathered by District staff for analysis during 2023.

7b. Objective – Require all water permittees that are required by the TCEQ to have well vulnerability studies prior to constructing a well, to provide evidence of the study to the District prior to construction of a well within the District.

7b. Performance Standard – Review all vulnerability studies submitted as a result of permit requirements to help ensure water quality protection.

7b. Performance Measurement – There were no wells submitted for permitting or construction that required well vulnerability studies. No well vulnerability studies were reviewed.

7c. Objective – Provide information to the general public and the schools within the District on the importance of protecting water quality.

7c. Performance Standard – The District will include a page on the Districts website devoted to water quality issues and will provide information to water permittees on wellhead protection programs.

7c. Performance Measurement – A water quality page is included on the District website. Several pages deal with water quality protection including a well plugging page and well head protection through proper capping of unused wells.

All new wells drilled or existing wells within the District that were registered or permitted (excluding rig supply and fracturing supply wells) were provided two brochures addressing protection of the wellhead and proper well construction.

Approximately 6,069 4th, 5th, and 7th grade students in the College Station, Bryan, and all Robertson County ISDs were taught about protecting aquifers from contaminants and the importance of protecting the wellhead. This was done in conjunction with a teaching session that included aquifer characteristics, the water cycle, and water conservation.

8. **Implement Strategies to Assess Adopted Desired Future Conditions**

8a. Objective – At least once every three years, the District will evaluate well water level monitoring data and determine whether the change in water levels is in general conformance with the DFCs adopted by the District. The District will estimate total annual groundwater production for each aquifer based on the water use reports, estimated exempted use and other relevant information, and compare these production estimates to the MAGs.

8a. Performance Standard – At least once every three years, the General Manager will report to the District the water level data obtained from the monitoring wells in each aquifer, the average artesian head change for each aquifer calculated from the water levels of the monitoring wells in each aquifer, a comparison of the average artesian head change for each aquifer with the DFCs for each aquifer, and the District progress in conforming with the DFCs.

Beginning in 2019, board members and the public have access to water level data in both numeric and visual form. A hydrograph reflecting the data on each monitored well appears on the website portal when the data file is accessed. The Board now has access to the data year-round rather than once per year.

During the May 11, 2023 Board meeting, James Beach, Advanced Groundwater Systems, gave a presentation summarizing the data obtained from each of the wells monitored in all aquifers managed by the District and District DFC compliance. The presentation included the average head change in each of the aquifers calculated from data obtained from monitoring wells within each respective aquifer, and how the artesian head calculated compared with the DFC established for each aquifer. All aquifer DFCs were found to be in compliance with the adopted levels.

Board members were also directed to the District website to view water level measurements obtained from all of the monitoring wells in the District. A

complete history of measurements exists on website groundwater map and is available for public consumption.

December 30, 2023, every static water level measurement taken during the preceding (12) months along with the hydrograph associated with the well was emailed to each of the current directors. The measurements were also made available to the public on the District website homepage.

8a. Performance Standard – At least once every year, the General Manager will report to the District Board the total permitted groundwater production and the estimated annual groundwater production for each aquifer and compare these amounts to the MAGs.

During each Permit Hearing, Board members are provided an informational sheet detailing the MAG, total permitted (to date) water production, and annual water production for the past year for each aquifer. The sheet for 2023 detailed water production (updated each February) for 2009-2022. Total permitted water production is done monthly and is current the day of the board meeting.
