

Reasoning and Approach

To address your request, I first analyzed the provided document, which is a formal letter from the Robertson County Judge to the Brazos Valley Groundwater Conservation District (BVGCD). The letter expresses concerns about proposed groundwater management changes, specifically regarding the Simsboro Aquifer, and provides recommendations for sustainable management. Below is a concise summary suitable for inclusion in a Word document, followed by a ready-to-use draft that you can copy into Microsoft Word or any word processor.

Summary of Key Points

- The letter expresses concern about the long-term availability of groundwater in Robertson County, Texas, especially regarding the Simsboro Aquifer.
- The proposed increase in average drawdown for the Simsboro Aquifer (68 feet, a 25% increase from the 2021 plan) is considered significant.
- The letter is pleased that other aquifers are not projected to experience material drawdown.
- Recommendations include:
 - Setting the Desired Future Conditions (DFC) at 284 feet of average drawdown for the current planning cycle, with reconsideration in 2031.
 - If 284 feet is not adopted, limiting projected drawdown to less than 5%.
 - Ensuring protection for domestic and livestock well owners from increased drawdown impacts.
- The letter emphasizes the importance of protecting groundwater resources for local communities, landowners, and agriculture.

Draft for Word Document

Subject: Comments and Recommendations on Groundwater Management in Robertson County

To: Brazos Valley Groundwater Conservation District (BVGCD)

From: Joe David Scarpinato, County Judge, Robertson County

Date: September 4, 2026

Summary:

This letter expresses concerns regarding the proposed increase in average drawdown for the Simsboro Aquifer, which represents a significant change from previous water plans. While projections for other aquifers are stable, the Simsboro Aquifer's sustainability is at risk. The following recommendations are made:

1. **Set the Desired Future Conditions (DFC) at 284 feet** of average drawdown for this planning cycle, with the option to reconsider in 2031.
2. **If 284 feet is not adopted, limit projected drawdown to less than 5%.**

3. **Ensure protection for domestic and livestock well owners** from the impacts of increased groundwater drawdown.

Protecting groundwater resources is vital for the well-being of Robertson County's residents, landowners, and agricultural operations. The BVGCD is urged to consider these recommendations in future groundwater management decisions.
