

Item 5 – Review of District Water Conservation Plan

The Education/Conservation Committee met on August 6, 2018 to review the District Water Conservation Plan, as per the District Management Plan, for the purpose of identifying and recommending revisions, if needed. The committee found statistical updates and insertion of recently obtained modeled available groundwater estimates following adoption of the desired future conditions were necessary but found no need for significant revisions to the Plan. Wording of the document was cleaned up to make the plan read better.

The committee and General Manager recommend the adoption of the revisions to the District Water Conservation Plan as presented.
