

Item #6 – Discussion/Possible Action Concerning Shallow and Overall DFC's

This is a follow up item from the January 15, 2015 Board meeting. There will be a GMA-12 meeting on Friday, February 27th. I hope to provide an answer to the Post Oak Savannah GCD request consider the development of shallow DFC's in addition to existing overall DFC's for each managed aquifer.

The subcommittee recommendation is to use the GAM Scenario 2 model run as a DFC starting place for each of our aquifers. This run takes into consideration the expansive population growth forecast by state demographers and being used by Brazos G regional planning group in their current 2017 State Water planning effort. The DFC level for each of the aquifers is listed at the top aquifer specific average drawdown map.
